

OBJECTIVES	Target	Progress with Targets <small>(based on progress with actions reported between 2005-7)</small>	Target Progress	Progress Summary	Plan Progress
A. Establish monitoring of the last remaining Warwickshire site and collate results to determine population status.	2004	<p><b>Target achieved.</b></p> <p>Monitoring has been undertaken each year since 2004. Only one individual recorded up to present at Hay Wood.</p>	↑	<p><b>Little progress except for advice to FC at Hay Wood which came a little too late and the key area of habitat had already suffered. However, the habitat is recovering and one individual was recorded in 2006.</b></p> <p><b>Another setback has been trampling of the area during felling to clear conifers in winter 2006.</b></p> <p><b>Ongoing liaison with FC needed if colony is to recover.</b></p>	↔
B. Check former sites to establish whether this species is still present	2004	<p><b>Target achieved.</b></p> <p>No further records for species outside of Hay Wood.</p>	↑		
C. Encourage the protection and appropriate management of the known sites.	2004	<p><b>Target achieved.</b></p> <p>BC have been liaising with FC over habitat management requirements at Hay wood</p>	↑		
D. Publicise the habitat requirements of this moth to landowners and other interested parties and give advice on beneficial management.	2005	<p><b>Target achieved.</b></p> <p>Advice given at Hay Wood, Sutton Park and to Hansons at Bubbenhall.</p>	↑		
E. Develop a better understanding of the ecological requirements of this species and best management practices	2010	<p><b>No progress</b></p> <p>No progress as population too small.</p>	↓
